Case 2 · ml-model-track-overlap-q1 (CompBioBench), GPT-5.5

Both runs reached 1,264; only the custom-code run asked why ENCODE tracks barely matched

Question: Borzoi and Sei are both DNA sequence models trained to predict genomic assay outputs. Out of the Sei tracks that are linked to a specific Cistrome ID, how many tracks share provenance with any of the tracks in Borzoi? Round your answer to the nearest 100.
