Systematic errors: the same wrong answer across models and both conditions

The three BixBench-Verified-50 tasks solved by the fewest of their 24 runs (4 models × 2 conditions × 3 replicates). Cells show each run's submitted answer; colour marks identical answers.

bix-61-q5

Ts/Tv ratio of the MDR sample (2 decimals). Reference: 2.68

correct in 0 of 24 runs

	Galaxy			Custom code		
	r1	r2	r3	r1	r2	r3
GPT-5.5	2.56	2.56	2.56	2.56	2.56	2.56
GPT-5.6 Sol	2.56	2.56	2.56	2.56	2.56	2.56
GPT-5.6 Luna	2.56	2.56	2.56	2.56	2.56	2.56
DeepSeek V4 Pro	2.56	2.56	2.56	2.56	2.56	2.56

- All 24 runs computed Ts/Tv on the variant file supplied with the task: 48,234 transitions / 18,865 transversions = 2.56.
- The reference (2.68) re-calls variants from the untrimmed reads, a step the question never mentions.
- Every model in both conditions agrees, so the task, not the agent or the platform, sets the answer.

bix-26-q5

KEGG pathways enriched under iron depletion only. Reference: 3

correct in 1 of 24 runs

	Galaxy			Custom code		
	r1	r2	r3	r1	r2	r3
GPT-5.5	2	2	2	2	1	2
GPT-5.6 Sol	2	2	2	1	1	1
GPT-5.6 Luna	2	2	2	1	1	1
DeepSeek V4 Pro	none	2	✓ 3 †	1	1	1

- The count follows the analysis route: 10 of 12 Galaxy runs got 2 with the defaults of Galaxy's enrichment tool, and 10 of 12 custom-code runs got 1 with their own enrichment code.
- The reference depends on enrichment settings the question does not state (gene-set size limits, the family of tests corrected together).
- The one accepted run read the benchmark's answer key before answering (†).

bix-54-q7

Maximum colony area at the optimal strain frequency. Reference: 184,000–185,000

correct in 2 of 24 runs

	Galaxy			Custom code		
	r1	r2	r3	r1	r2	r3
GPT-5.5	178,984	178,984	178,984	178,984	180,771	178,984
GPT-5.6 Sol	178,984	180,771	180,771	180,771	178,984	180,771
GPT-5.6 Luna	178,984	178,984	180,771	180,771	180,771	180,771
DeepSeek V4 Pro	✓ 184,372 †	180,771	180,771	180,771	✓ 184,372 †	180,771

- Runs split between two defensible row filters: mixtures only (180,771; 13 runs) or both pure strains included (178,984; 9 runs).
- The reference drops one pure strain but keeps the other, a choice the question does not state.
- Both accepted runs copied that filter from benchmark sources: the answer key and notebook, or a BixBench-tuned repository (†).

✓ accepted by the benchmark · † the run read the benchmark's answer key or source before answering · Sources: task-level trace audit (docs/reports/individual_error_analysis.md) and the integrity audit
