Case 4 · contaminated-rna-q3 (CompBioBench), GPT-5.6 Luna

Galaxy's default Kraken2 database includes ape genomes, so the chimpanzee reads stood out

Question: You are given a single-end RNA-seq FASTQ file. The sample is expected to be human, but it may contain reads from another organism. Determine the genus of the most likely non-human organism present, if any (lowercase scientific genus name, or "none").
