

a The trade: same accuracy, more input tokens

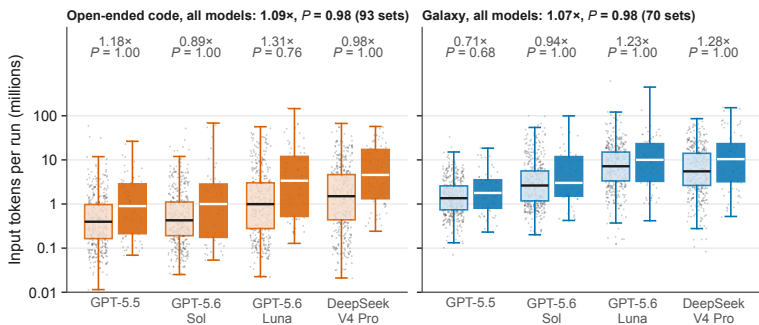

BixBench-Verified-50 and CompBioBench; each point is one replicate (one run per task)
Numbers: times more input tokens in Galaxy on the same task

b Incorrect runs cost no more than correct runs of the same task

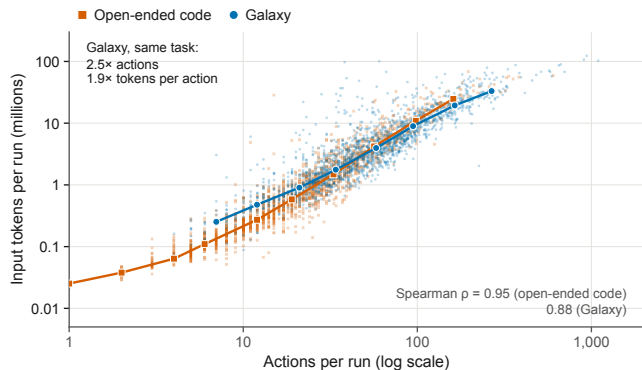

Numbers: input tokens of incorrect runs relative to correct runs of the same task and model

Open-ended code, correct Open-ended code, incorrect Galaxy, correct Galaxy, incorrect

c Cost follows interaction

Correct runs; lines join median input tokens in bins of actions

d Finding tools is half of what Galaxy sends back

Each Galaxy interaction is a request from the agent and a text reply from Galaxy;
the model reads every reply and rereads it at each later step (all Galaxy runs)
