

a Installed tools each model used (15 most used)

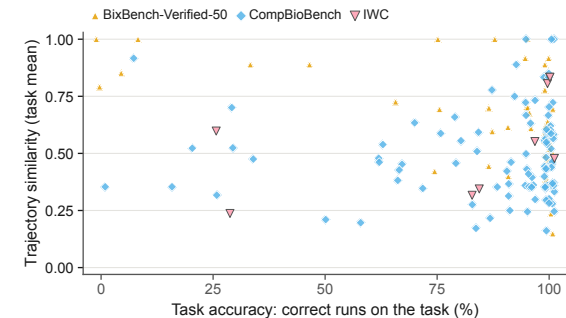

b Same answer in all three runs, by model

c Same trajectory and task accuracy

Galaxy; 1 = the same tools in all three runs (a UDT is one step)
 Across tasks: Spearman $\rho = -0.01$, $P = 0.85$; 159 tasks
 Models on the same task, trajectory similarity against accuracy: $\rho = 0.05$, $P = 0.33$

d Wrong answers: random or systematic?

Replicate sets (three runs of one task by one model) with at least one wrong answer;
 BixBench-Verified-50 and CompBioBench, both environments
