

Unanimous accuracy was higher in the Galaxy condition for every model configuration; every 95% interval included zero

Pooled condition difference: four Codex model configurations +3.0 (-4.2 to +10.7); all five +4.0 (-2.8 to +11.3) percentage points. Intervals: 95% percentile cluster bootstrap over source capsules (20,000 resamples). Run-level accuracy is compared with unanimous accuracy in Fig. 4e.
