

a Primary cause, every task with a rejected run

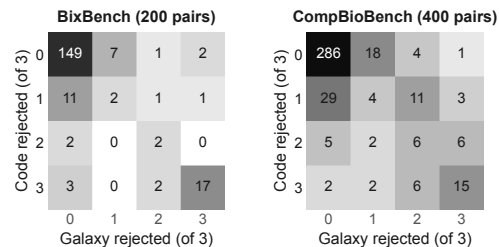

b Verification and domain tags

c Persistent versus sporadic failures

d Rejected attempts, same task × configuration in both arms

e Recorded decisions identify concrete validation checks

Task	Recorded problem	Useful check
bix-52-q2	Digits-only filter drops W and Z	Assert identifiers and row counts
variant-status-q1	Pileup allele supported at read ends	Audit allele support by read position
exogenous-mix-reads-q1	Fit and score on the same reference reads	Hold out or cross-fit read groups
IWC mitogenome	Circularity or self-mapping used as identity	Test independent organellar identity
histone-chip-q1	Negative candidate test not acted on	Reject candidate or broaden hypotheses
