

a Recorded evidence and parameter-check coverage

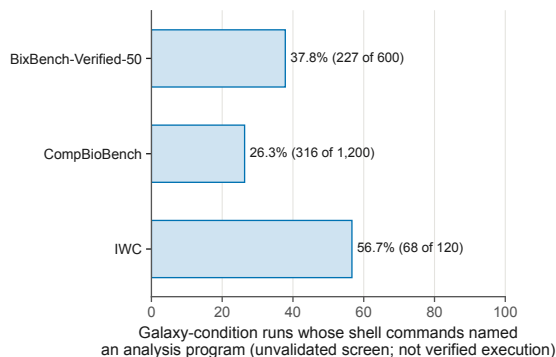

b Primary cause in the targeted trace audit (93 task cases)

Outcome-selected task cases plus one near-perfect IWC case (AI-assisted trace review). Not an exhaustive audit of all runs; causes are not split by condition.

c Execution location in Galaxy-condition runs: an all-run screen and confirmed cases

Confirmed in the targeted audit (observed cases, not prevalence):

- 18 CompBioBench Galaxy-condition answers were computed in the local shell after user-defined-tool execution became unavailable (15 scored correct)
- 2 Galaxy-condition answers were copied from other runs through the shared Galaxy account
- 26 task cases in which agents retrieved, or tried to retrieve, benchmark answers online (both conditions)
